" We never give in and we always win."

"Yet apparently purely on the basis of a perceived threat from SHAC, the NYSE postponed plans to list our stock. A handful of animal extremists had succeeded where Osama bin Laden had failed... The fact that our listing was postponed only after it had been made public has been nothing short of disastrous, quite frankly."

Mark Bibi, HLS Counsel, Senate Committee Hearing U.S. Nov 2005

Global Warmin

Welcome to SHAC Newsletter 39

Stop Huntingdon Animal Cruelty (SHAC) campaigns against Huntingdon Life Sciences, Europe's largest animal testing laboratory. Huntingdon Life Sciences experiment on lots of different animals: horses, rats, mice, dogs, cats, fish, birds, monkeys, mini-pigs, rabbits, ferrets, even donkeys and deer according to their own promotional material.

Huntingdon Life Sciences have been the subject of 5 undercover investigations at their 2 labs in the UK and one in America. These investigations revealed a catalogue of some of the worst animal cruelty ever caught on film, with workers in the UK punching beagle puppies in the face and pretending to have sex with them, and workers in the USA cutting open monkeys from neck to groin that were still alive.

HLS workers have been exposed for falsifying experiments to get drugs on the market, being caught drunk on the way to work and dealing drugs on site. They even have a convicted sex offender working with animals in one of their labs.

HLS experiments we have uncovered include testing sun tan lotion, artificial musk, artificial sweeteners, food packaging, paints, dyes and food additives. To get these toxic products on to the market HLS killed thousands of animals.

SHAC is a global campaign with many thousands of supporters worldwide. SHAC campaigns within the law, holding demonstrations, making phone calls and emails, writing letters and doing everything we can to put the spotlight on HLS and those immoral enough to do business with them.

HLS are 75 million dollars in debt and have lost hundreds of suppliers and customers globally thanks to caring people worldwide.
Please fight for the animals inside HLS - you are all they have.

Disclaimer

This newsletter is not intended to encourage illegal activity of any kind. SHAC's intent is to close down HLS by legitimate means only, spreading information and disseminating the facts relating to HLS's record of animal cruelty, fraud and incompetence. We believe that there is more than enough evidence for the UK government to withdraw HLS's licence and close them down.

Readers must bear in mind that certain demonstrations eg home demonstrations are now illegal in the UK although they are perfectly legal in other countries, and the inclusion of reports relating to these demos abroad does in no sense amount to encouragement to do similar demos in the UK.

Company details are listed for the purposes of readers making informative and polite communications with the companies listed. The details are not intended for repetitive, rude or threatening calls.

Readers are encouraged to familiarise themselves with the law by sending off for our legal booklet and visiting the legal website www.freebeagles.org. Please contact SHAC if you have any queries.

You wanna watch? Then watch this...

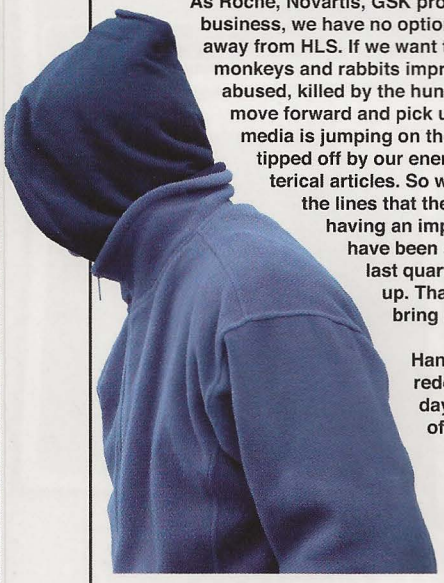
SHAC Europe round up

The Shac campaign in Europe is growing and unstoppable. Mobile demos happen every week at the customers of HLS, picket lines in front of their offices and demos at suppliers like UPS. The UK government tried to stop this by contacting the different countries asking them to act hard and efficient. Activists in Sweden, the Netherlands, Canada and of course in the UK have seen the other side of the prison door for demonstrating at these globally represented companies.

Is this the end of Shac Europe? No way, this has just been the start of something much bigger! Activists have been more active then ever. 14 countries have taken part in Shac campaigning in 2005 and this year will see a rise of even more.

For activists throughout the whole of Europe, the Shac campaign has been truly inspiring and motivating. Never before in the Shac campaign has there been so much involvement from people across the nations. As our enemies have offices everywhere and are represented all over the world, so we have groups ready to shake them up. These people are amazing and know what to do. No corrupt government can stop us now. Never before in history have huge companies like Roche, Novartis and GSK have been in the middle of such a hardhitting campaign. These companies are bigger and more powerful then most states yet they are no match for the global AR movement.



As Roche, Novartis, GSK provide most of HLS's business, we have no option than to chase them away from HLS. If we want to save the beagles, rats, monkeys and rabbits imprisoned, poisoned and abused, killed by the hundreds a day, we have to move forward and pick up the fight. The british media is jumping on the global train, again tipped off by our enemies, and is writing hysterical articles. So what. We read between the lines that the global campaign is having an impact. The orders for HLS have been stopped and went down last quarter, while the costs went up. That is all that matters to bring animal freedom.

Hang in there Heather - we'll redouble our efforts. The day we dance on the ruins of HLS is coming closer.

BY SPECIAL DELIVERY

To whom it may concern

It has come to our attention that our company, Madoff Securities International Limited, has been listed on your website as a "Financial Target". We would like to take this opportunity to inform you that Madoff Securities International Limited and persons connected to this company no longer have any business relationship with Seaboard Securities either directly or indirectly and as such are no longer indirectly involved with Huntingdon Life Sciences stock (LSR1). In addition, the views of Madoff Securities International Limited are not contrary to the views expressed by SHAC in relation to the prevention of cruelty to animals.

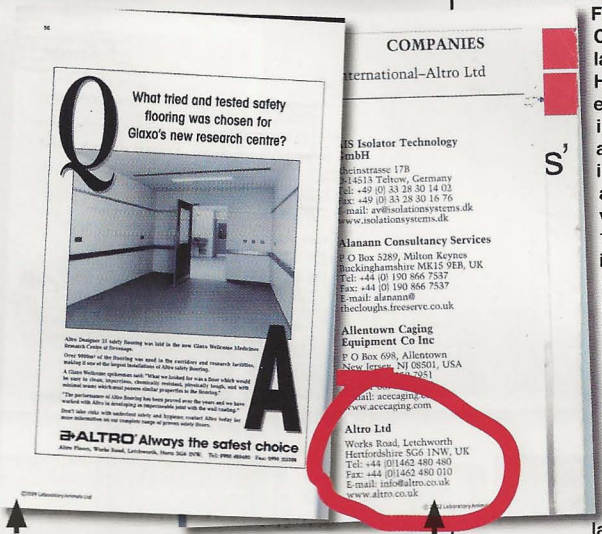
Accordingly, please remove our name from your website with immediate effect.

Yours sincerely,

PETER ALLEN
COMPANY SECRETARY
ON BEHALF OF
MADOFF SECURITIES INTERNATIONAL LIMITED

Member of The London Stock Exchange Authorised and regulated by the Financial Services Authority
Registered in England No. 1785562 Registered Office address as above

HLS Market Maker Seaboard were embarrassingly dumped by their clearing broker Madoff Securities (they clear all Seaboard's share trades and so are important to them). Madoff sent a statement to SHAC by guaranteed next day delivery to inform us of the fact... So you see SHAC hits the parts others cannot reach!



Imagine our surprise when a supporter emailed over the response she had from HLS supplier Altro in which they claimed:
" Our routes to market are through distributor and flooring contractors and as such we have no direct control or knowledge of where our products are used..... The SHAC website also accuses Altro of being a regular advertiser in "Vivisection magazines". Although I do not know exactly what is meant by this description, as far as we are concerned we do no such thing."

Altro regularly advertise in journals like the ones above which are a lab animal buyers guide and its quarterly cousin as well as the renowned US website Lab Animal. The fact of the matter is they actively seek work from labs and regularly advertise in lab animal journals. Only a HLS supplier would be stupid enough to try to lie when such damning evidence is out there in the public domain. Stupid or what?

Hot on the heels of American Century followed Gruber McBaine who sold all their HLS shares worth $775,000.

New Jersey Society for the Prevention of Cruelty to Animals sues HLS over animal cruelty

Filed in Middlesex County, The NJSPCA's lawsuit criticizes Huntingdon Life Sciences' use of animals in product research, and is based largely on incidents undercover activists said they videotaped in 1996 and 1997. Federal officials investigated those charges in 1998 and reached a settlement with Huntingdon to improve conditions for animals at its Franklin Township lab.

"The USDA did its investigation, but the NJSPCA has its own duties under state law," society spokesman Matt Stanton told The Star-Ledger of Newark for Thursday's newspapers.

Roche demo in Sweden

On Tuesday January 31st, over 20 protestors turned up on the doorstep of Roche in Stockholm, Sweden, and held a very noisy protest for over an hour that could not be missed by anyone. The people working at Roche turned the lights off in their offices, strangely, but we informed them that there will be other days and more and more awareness raising of their connection to HLS and as long as they do business with HLS we will be back to highlight this.

News in Brief

Customer & Financial demos in Philadelphia, U.S.A

More demos in Philadelphia today against the companies working with HLS. We started off with a new one, Bank of America, which invests 3 million dollars in the lab. We held a noisy demo in front of their downtown office, and watched through the glass front of the building as they motioned angrily on the phone for a good half an hour, not sure what to do with us there. Some passersby were crying when they saw pictures from inside HLS, and they signed on to come to future events.
After a while we decided we'd go in to have a little chat with them, but they had locked their doors! Oh well, who needs customers anyway?

Next a short visit to Fidelity Investments, which still invests in HLS as well. We went to their office and let our vocal cords loose, showing the staff and single customer the things Fidelity is investing in. After being ushered out by security, we headed on to GSK.

The usual GSK greet the workers demo followed: cop cars pulled up on the sidewalk, GSK workers were laughed at (greet the workers demos are an excellent time for polishing your stand up routine), flyers about HLS distributed to workers and passers by, and GSK security scurried around with their walkie talkies looking stressed out. We even split into two teams, with the second team setting up shop up the street at GSK's parking garage, where they gave GSK employees a second earful on their way home for the evening. We are sure they were well and truly educated about GSK's support of the cruel and fraudulent HLS.

STOP PRESS: 170 Activists carry out home demos in the U.S. inc GSK US Vice President

News reaches us as we go to press of a series of massive home demos in the U.S. against HLS customer execs including the Vice President of GSK USA where over 170 people took part.

28 Beagles Liberated in Spain

"Our celebration of the New Year was something different from the normal thing. A few hours after the year began, we were in the Faculty of Veterinary Medicine at the Independent University of Madrid, about 400 meters from Moncloa, where Spanish politicians were enjoying a celebration in the palace. But we had better things to do. In the animal facility, we found 28 beagles in cages, destined to be killed by university vivisectors.

We opened the door and one by one we rescued them all. Four minutes later we were already on our way.

Among those that we removed were puppies of little more than a month old, and another litter had been born that same night. These last puppies did not have much luck. The night was very cold and they had been caged outside. In addition the hygienic conditions were poor. These puppies had been born on a layer of excrement and rust, on a ground of cold cement with an outside temperature of 2°C. When we arrived at the cage one of the six puppies was already dead. The rest were taken directly to a veterinarian. Unfortunately the efforts of the veterinarian and the mother were not sufficient and three did not survive.

Of the 28 beagles that we rescued, we recently discovered that one of the females is pregnant. The veterinarian did an ultrasound and told us that there will be 5 or 6 puppies soon. These puppies will be born and live in an environment of affection and happiness, and will never know what a laboratory is."

The Best of Friends!!

ot without my regrets. I am here today to be sentenced for my participation in releasing mink from 6 fur farms. I regret it was only 6. I`m was only 8,000. It is my understanding of those 6 farms, only 2 of them have since shut down. I regret it was only 2. esses, if those farms were left standing, and if one animal was left behind, then it wasn`t enough.

is system had a conscience I would not be here, and in my place would be all the butchers, vivisectors, and fur farmers of the world. rmers in the room the pleasure of seeing me bow down before them. To those people here whose sheds I may have visited in 1997, let me nimals I answer to, not you or this court. I will forever mark those nights on your property as the most rewarding experience of my life.

remember: We have put more of you in bankruptcy than you have put liberators in prison. Don`t forget that. e prison that each of you drive to a nearby fur farm tonight, tear down its fence and open every cage.

his sentencing for mass mink liberations in the US for which he got 2 years in jail.

The real fight over the Oxford animal lab begins:

In November 2005 the stalemate over the part built animal lab on South Parks Rd finally came to an end and the next stage of this historic struggle began. For eighteen months supporters of the SPEAK campaign remained resolute in their determination to stop an arrogant minority and their friends in this corrupt government from resuming work on this centre of animal abuse. Often facing hostility from officers and employees of Thames Valley police and Oxford university activists kept up a constant pressure. It was always going to be the case that Oxford university would with the aid of its government friends attempt to finish the shameful project it had begun almost two years previously.

What Oxford university and Thames Valley police had failed utterly to understand was the determination and strength of the a/r movement to stand firm in the face of the intimidation and bully boy tactics that have come to typify all those connected to animal abuse at Oxford university. Since resumption of work at the South Parks Rd site almost two months ago we have witnessed the fortification of this animal prison site complete with steel fencing, razor wire and security lighting. But perhaps the clearest indication of how desperately low this so-called academic institution has sunk can be seen in the spectacle of balaclava wearing workmen escorted by masked security guards as they go about the business of doing the university's dirty work.

SPEAK has said all along that we would pursue this battle brick by brick if necessary and already it is becoming clear that the net is closing on Oxford university and those willing to abandon principle and ethics for short term monetary gain. The collective intelligence and commitment of the a/r movement is already causing the elite of Oxford university and TVP to consider the wider implications of this struggle.

Of course this battle will not be easy and we are now seeing the emergence of a group claiming to represent the majority who are in favour of this animal torture centre. This coupled with a slavish media content to represent the animal rights movement as extremists or terrorists without any serious attempt to examine the real issues of animal abuse and backward scientific thinking and you begin to realise just what is at stake. What must not be forgotten in all this is the suffering of the animals, victims of an institution that has used lies and deceit in a bid to hide the truth about the site on South Parks Rd. The coming weeks and months are going to see the battle lines drawn but Oxford university and all those connected to this project must realise by now that the a/r movement is mobilising itself ready to take them on. Sadness or sympathy for the plight of animals suffering now or those who not yet born who would fill the laboratory walls on South Parks Rd is not enough. Those feelings and emotions must be turned into action that will ensure that the doors of this animal abuse centre are never allowed to open.

Demo Dates: Saturday 25th February, 24th March & World Day for Lab Animals Sat 22nd April (these 3 dates are all meeting at Carfax Tower, Oxford City Centre). Also All Night Vigil Fri 17th Feb from 9pm meeting at the edge of the injunction zone, South Parks Rd, Oxford. All the above demo dates are major dates so please attend. There are also regular demo dates in between - please check with SPEAK for dates and times. SPEAK: PO Box 6712, Northampton NN2 6XR

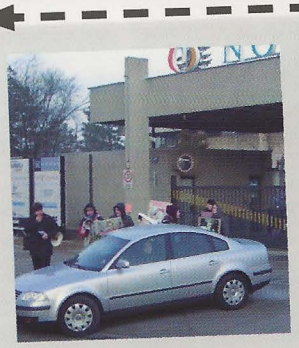
STOP PRESS SHAC DEMOS

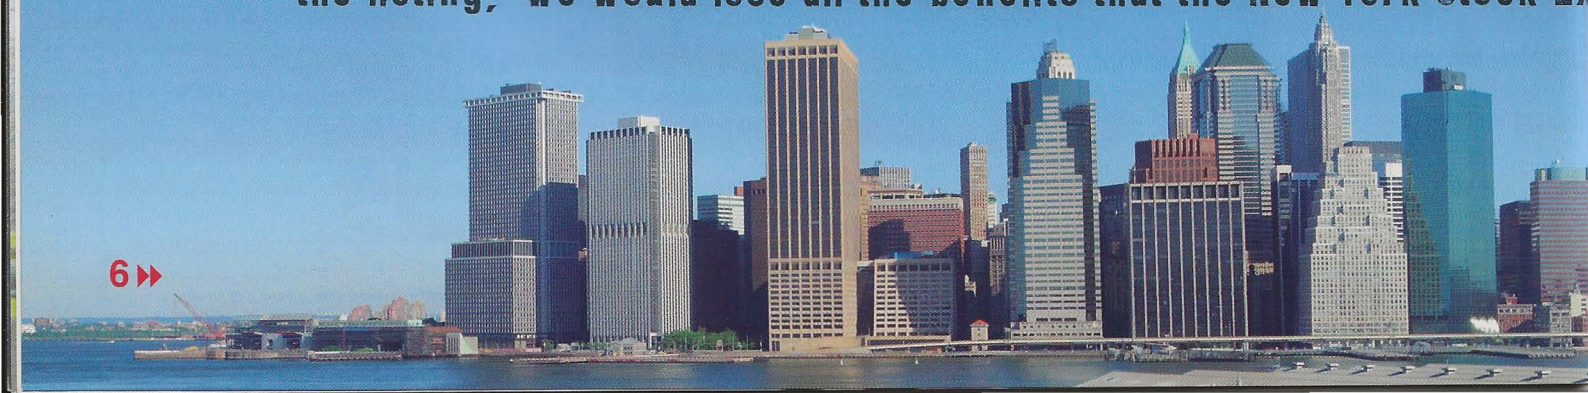
SHAC is becoming more and more of a global force each and every year. Over 14 different countries took part in SHAC GLOBAL last year and at the beginning of February 2006, Austria joined the international campaign. The Animal Rights movement is extremely alive and kicking in Austria, a country that has banned battery farming and dogs and cats in pet shops!

The focus and determination from Austrian activists was really portrayed well through the demos that have happened there. On the first day, activists visited a huge Novartis primate lab, the only lab to contain primates in the whole of Austria. For over three hours the activists stood outside with huge banners and three very loud megaphones, naming and shaming the company for working with Huntingdon Life Sciences.

Over the next few days activists in Austria visited some amazing targets such as big Japanese puppy killers like Sankyo Pharma and Astellas. The quality of all these demos is a real credit to the



"Regrettably, it appears that the investment community is now losing our stock has now traded down to about $10 a share. So roughly $100 the listing, we would lose all the benefits that the New York Stock Ex



3 DAYS OF IN AUSTRIA

Austrian AR movement, with even a group of unknown activists getting stuck in on the second day with their own HLS demos as the word of SHAC spread! Other targets that were on the receiving end of SHAC Austria this time around were companies such as HLS customer Abbott Labs. Activists stood outside of their huge building in Vienna with posters and megaphones letting everyone know that SHAC will visit every country that contains HLS supporters and let them know exactly who they are dealing with.

Along with other HLS dealing companies such as Actelion and York Refrigeration, around 15 home demos took place against directors of customers of HLS. Many of these people worked for Novartis and with hundreds of leaflets the activists made sure everyone around their neighbourhoods found out about their connection to animal murder.

3 days of amazing action from Austria: SHAC GLOBAL is storming into 2006 and this is only the beginning!

U.S. Group W.A.R. launches Operation Knockout against HLS investors

Wednesday, January 25, 2006
WAR Returns to Home of GSK's Deryck Maughan
On Wednesday, January 25th WAR returned to the posh Fifth Avenue digs of Sir Deryck Maughan, who sits on the Board of Directors of pharmaceutical giant GlaxoSmithKline (GSK).

We have been to this location many times and no doubt we will keep returning until Deryck cuts his cruel ties to HLS or until GSK cuts its ties to the puppy killing scum at Huntingdon Life Sciences. This has to be one of our favorite locations. Each time we come to this building, Deryck's neighbors seek us out to ask questions and to express their horror and dismay at knowing that one of their neighbors is responsible for such abhorrent animal cruelty. We have had many of his friends and associates promise to share their feeling with Deryck. We will never back down until they stop the killing!

Thursday, January 26, 2006
WAR Goes to Wall Street
On Thursday, January 26th a small group of dedicated WAR activists took to the streets of lower Manhattan to face two of the most prominent financial supports of Huntingdon Life Sciences which trades on the OTCBB (Over The Counter Bulletin Board or Nasdaq) as LSRI. (Or did!)

An educational outreach table was set up at the 75 Maiden Lane, New York offices of Seaboard Securities, which is headquartered in Florham Park, NJ. WAR has printed a large quantity of a full color flyers letting Wall Street folks know about Seaboard's loose to non-existent business ethics and shady practices. The header proclaims Seaboard as LIARS & CROOKS in large block letters.

After spending the majority of the afternoon educating Seaboard's building neighbors and passersby, we began to wonder if we would see anyone from Seaboard that day. Our patience was rewarded as 3 characters sauntered up to our table looking like they had just come from a casting call for the HBO mobster series, The Sopranos. The men lied (what did you expect?) when asked if they were associated with or employed by Seaboard Securities. We were suspicious, as they seemed to know exactly why we were there. Activists offered the men the Liars & Crooks flyers and explained that Seaboard had more than once in the past sent written assurance that they were no longer trading LSRI stock, only to be found out to be lying about it. Couple this with the company's recent indictments and convictions for stock fraud and we feel that our Liars & Crooks headline is justified.

When the men refused the flyers, we assured them that they could take as many as they wanted as we have 5,000 of them printed for distribution around the Wall Street area. This caused one of the men to approach the table in a menacing and aggressive manner only to shout: "You are a DOUCHEBAG". He then identified himself as Anthony DiGiovanni, the PRESIDENT of Seaboard Securities!!! President Tony then made the following threat to activists: You keep it up and I will have the FBI crawling up your ass.The threatened activists, shocked and disturbed by the outburst of gutter language and threatening behavior of the thuggish Seaboard executives, are wondering if they will one day awaken to a severed horse's head in their beds or a dead fish wrapped in newspaper sitting on their doorstep. Despite the threats, activists have vowed to distribute every single flyer. No wonder this company remains in bed with Huntingdon Life Sciences!!!

faith in the likelihood of the Stock Exchange doing the right thing, as

n. The Assault on their financials begins.

Figs 1- 3. Huntingdon demonstrate how to go from about to play football in the World Cup to playing in the Sunday League. And all within 5 months!

Well well well what a financial fall from grace eh? So public too! Huntingdon last August press released about how they were about to be listed on the New York Stock Exchange - Fig 1. They were 45 minutes away from the bell going to start trading their stock when they were taken to one side to be told that their listing was..errr..postponed! The media descended on to Cass and Bakers's embarrassment with glee.

So this left Huntingdon on the Nasdaq Over the

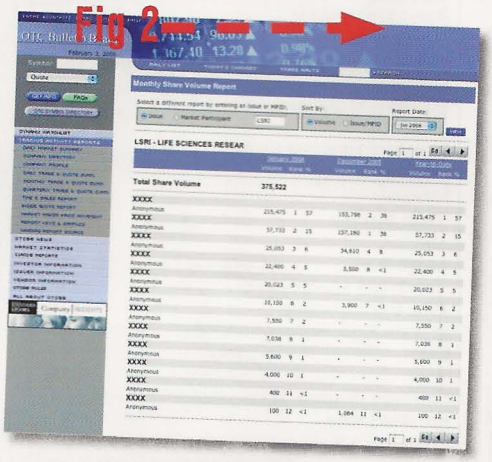
Fig 1

Counter Bulletin Board, which is a very lowly version of the NYSE. They hoped they would only be left on the OTCBB a few weeks while the NYSE decided to relist them. Well as weeks turned into months this started to look like it would never happen.

To stay on the OTCBB you need a least one market maker to register that they will make a market in your shares. For the last 3 or so years Huntingdon had held on to a listing on the OTCBB by having a company called Legacy Trading act as their market maker. Legacy had a lot thrown at them but refused to move. To give you some idea of what kind of company Legacy are, their owner said in a taped conversation with SHAC that "I would trade in child porn stocks if it were legal". You get the picture that they and HLS made very good bedfellows!

Over the past few months we have stepped up our attention on HLS shareholders globally seeing about 10 large institutional shareholders dump their shares in HLS. We also targetted market makers who were buying HLS shares on an execution only basis ie they would buy their shares per order that they received but these market makers would not register as permanent dealers in HLS shares. So the OTCBB took the extraordinary step of making all the trades made by these companies and their details anonymous - see Fig 2.

Fig 2



Little did the OTCBB know that we were able to still receive the information from several inside sources in the U.S., but this was a sign of their growing desperation to protect poor old HLS.

Now some bright spark at SHAC (and remember I could have made out here it was me so that shows how honest I am!) had worked out that all market makers need a clearing broker to electronically clear through the system all that company's trades. Well Well well we thought, maybe Legacy who were in Hicksville USA and who had shown two fingers to the animals inside HLS were now vulnerable.

With a bit of research we discovered that the clearing broker for Legacy was a company called Sterne Agee. We sent out an email action alert with details of Sterne Agee on the 9th of January and activists in the US prepared to carry out demos against them.

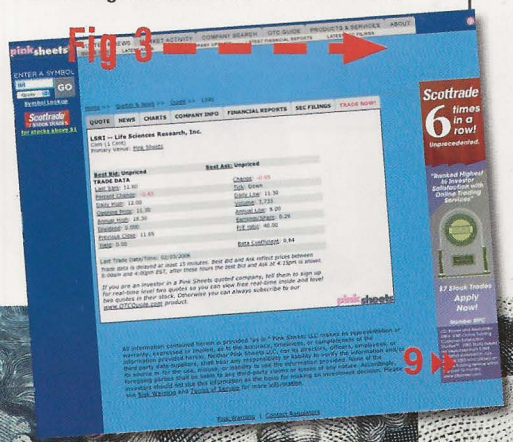
On the 1st and 2nd Feb we noticed some odd goings on at the OTCBB listing for HLS (LSRI) and on Friday morning saw a new symbol appear that we didn't recognise. We contacted the OTCBB and they said it meant that HLS had been bumped off on to the Pink Sheets which was incredible news. This meant Legacy must have gone and HLS had been kicked off the OTCBB. Now let me try to put this into simple

It`s always easy to spot someone who has signed a contract with HLS...

terms. It would be like playing in the World Cup (NYSE) then a few months later playing Sunday League football (The Pink Sheets) or like running GlaxoSmithKline one week and a corner shop the next.

We contacted Skip Bourchin at Legacy (not as SHAC of course) to find out why they had left HLS and he confirmed that Sterne Agee had turned round to Legacy and told them that if Legacy didn't dump HLS, then they Sterne Agee would dump Legacy, meaning that Legacy were unable to trade in any company. So with HLS with no market maker, Nasdaq were forced to bump HLS on to the Pink Sheets. As Skip Bourchin said this will make HLS invisible to most investors. He went onto to say that this was a massive blow to HLS and Legacy. We have outsmarted them yet again and taken activism on to another level with the campaign's understanding of clearing brokers. One thing is for sure and that is this: a bad day for HLS and Legacy means a good day for us and more importantly a good day for the animals inside HLS as it brings the demise of HLS ever closer.

Fig 3



The BIG SHAC

The companies listed on these two pages are all suppliers to Huntingdon Life Sciences, enabling them to carry out their business of killing animals and putting all kinds of useless and toxic products on the market. Please contact them all and explain to them about HLS's record of animal brutality, fraud and incompetence. You can be sure HLS won't. Keep all communications informative and polite of course!

E-mail: Mobrey.Enquiries@EmersonProcess.com

Emerson Process Management
Horsfield Way,
Bredbury, Stockport SK6 2SU

tel 0870 240 1978fax 0870 240 4389
uksales@emersonprocess.com

www.emersonprocess.co.uk

4 Monock Freight

Monock Freight Ltd
14 Mount Road, Feltham, TW13 6AR
Tel: 0208 894 5400
christine@monockfreight.com
geoff@monockfreight.com

Monock Freight deliver lab animals to HLS.

5 BBC Fire Protection

BBC Fire Protection Limited
St. Florian House,
Ayton Road,
Wymondham
Norfolk
NR18 0RA

Tel: 01953 857700
Fax: 01953 857750

Email: sales@bbcfire.co.uk
Website: www.bbcfire.co.uk

A company local to HLS's lab at Eye but deals with both UK labs.

6 KD Systems Ltd

K D Systems Ltd
Unit 2 Felnex Close
Cross Green
Leeds, W. Yorkshire
LS9 0SR
Tel : 0113 249 8755
Fax : 0113 248 4565
Email: david@kd-systems.co.uk

This Leeds firm have been spotted up at HLS.

7 Parkside Construction

Parkside/Most Construction
Tel: 01423 565 572 and 01423 521 298
12a Park Parade, Harrogate, HG1 5AF
gm@mostconstruction.plus.com
al@mostconstruction.plus.com

Most construction alias Parkside have participated in the building of units to house animals in at HLS and have made themselves a fortune on the backs of animals dying inside HLS.

8 Fetch Europe

FETCH EUROPE
IFetch Europe Ltd, 3 Woodhurst Drive, Denham, Bucks UB9 5LL
Tel 01895 835 774 Mobile 07764 584 413
email: info@fetcheurope.co.uk

Fetch Europe are heavily involved in the lab animal transport trade and think it's funny to send emails to the campaign saying how they couldn't care less about driving animals to their deaths and how they really support HLS.

9 York Refrigeration

York Refrigeration are a key supplier to HLS and guess what? HLS owe them tens of thousands of pounds! York have met with HLS to discuss an early end to their contract. www.york.com for nationwide sites

Head office:
YORK International Ltd
Gardiners Lane South
Basildon, Essex SS14 3HE
Tel: 01268 246000
Fax: 01268 246001

Headache Cure

10 Phenomenex

PHENOMEMEX
Phenomenex supply lab equipment to HLS.
PHENOMENEX
Melville House, Queens Avenue,
Hurdsfield Industrial Estate, Macclesfield,
Cheshire SK10 2BN Tel: 01625 501 367 Fax: 01625 501 796

11 Vet Way

VET WAY AND DGP
1 Harrier Court, Airfield Bus Park,
Elvington, York YO41 4AU Tel 01904 607 600
Email: sales@dgpgroup.com
Vet Way/DGP have been lying. They made a statement but HLS now send their own vans as Vet Way's courier company won't go there. How stupid Vet Way are to think they wouldn't get caught out....

12 HRP

HRP
HRP, Unit B6, Manton Centre,
Manton Lane, Bedford MK41
Tel: 01234 272 702

HRP, Rougham Industrial Estate,
Rougham, Bury St Edmunds, Suffolk IP30 9XA
Tel: 01359 270 888
A local firm to HLS passing on equipment to HLS for Eastern Counties, listed below.
Email: bedford@hrpltd.co.uk

SHAC has contacted this firm and the managing director of it said that it is a free country and people can do what they like. Of course it is, and we can carry on informing her staff of just who they are doing business with.

13 Impex Trading

IMPEX TRADING, PO Box 187,
Huntingdon, CAMBS PE28 4JF
Tel 01832 275 404
Email: info@impex-uk.com
This evil company is heavily involved in the lab animal transport trade and is working hand in glove with HLS.

14 SJ Marlow Pipework Services

SJ Marlow Pipework Services Ltd
Still Barn Farm,
Upper Batley, Low Lane
Batley,
West Yorkshire,
WF17 0AW
Tel: 01924 479168

This company are in and out of HLS like yo-yo's.

15 Biocair

BIOCAIR
The Business Centre,
Church End,
Cambridge, CB1 3LB
Tel: 01223 245 223

This is a vivisection industry freight company that have been spotted going in and out of HLS by local supporters on a regular basis.

16 Industrial & Scientific Supplies

Industrial and Scientific Supplies
The Grip Industrial Estate, Linton,
Cambs CB1 6NR
Tel: 01223 891 953
www.industrialscientific.co.uk
Email: sales@industrialscientific.co.uk

HLS owe them 36 thousand pounds!

17 PDP Couriers

PDP COURIERS
PDP Courier Services Ltd
Unit 10, Ashford Industrial Estate, Shield Road, Ashford, Middlesex TW15 1AU
UK Head Office
Tel: o1784 420466
Fax: o1784 246619
Email: Sales@pdpcouriers.com

PDP have repeatedly lied to the campaign about their involvement with HLS. In a recent conversation when they were caught out yet again dealing with HLS, they tried to say that they deal with Centralabs, (who are the clinical trials part of HLS with all the same directors) and that therefore in actual fact they were not dealing with HLS. What liars.Oh yes I nearly forgot, and the fact that they go into Huntingdon regularly is a big part of their lying as well.

18 Tecniplast UK Ltd

Tecniplast UK Ltd
Venture Park
Kettering Venture Park
Kettering
Northamptonshire
NN15 6XR

Tel: 01536 312512
Fax: 01536 312505
Email: info@tecniplastuk.com

Website: www.tecniplastusa.com

This vile company make lab animal cages. They boast that they have been leaders in this field for over 50 years and that they regularly are involved in the design, construction and refurbishment of new and existing animal facilities.

19 Strand Transport

STRAND TRANSPORT SERVICES
Strand Transport Services Ltd,
Strand House, Rugby Road Industrial Estate,
Rochdale, Lancs OL12 0EP
Tel: 01706 868 486
Email: david.greenhalgh@strandtransport.co.uk
Strand do daily deliveries in the UK for major HLS supplier Perkinelmer and visit HLS on a regular basis.

20 Peterborough Pumps & Valves

Peterborough Pump and Valves
The Old Forge, Cross Street,
Farcet, Peterborough PE7 3DE
Tel: 01733 242 497
HLS owe them at least 59 thousand pounds! What a great client!

21 Scott Nutritions

SCOTT NUTRITIONS
Scott Nutritions, Sedge Fenn Road,
Southerry, Downham Market,
Norfolk Tel: 01353 676 234
This company supply HLS and Interfauna beagle breeders for vivisection with animal feed.

Oi! Don't Puke on this page. Not such a good idea to deal with HLS now, is it ?

700 STROKE TREATM ANIMALS BUT NOT ONE HA

The Green Goddess, The Independent 16th Jan 2006

While the debate rages on, lab rats are still suffering The last time I visited the Houses of Parliament was seven years ago to have tea with my then romantic interest, who was a member of the House of Lords. It was a comforting occasion, with homely waitresses, toasted teacakes and lashings of your lordships. This antiquated vision has fortunately been swept away and replaced by Blair's hand-picked cronies. Far more democratic!

I only share this blast from my past because my most recent visit wasn't so comforting. For a start, the queues! It's easier to get through customs at Tel Aviv airport these days than through security at the House of Commons.

This time I was attending a debate: "Is animal experimentation helpful to medicine?" Pro-vivisectionists Professor Colin Blakemore, chief executive of the Medical Research Council, and Dr Simon Festing, executive director of the Research Defence Society were ranged against Dr Jarrod Bailey, science director of Europeans for Medical Progress, and Dr John Pippin, consultant to the Physicians Committee for Responsible Medicine.

Drs Bailey and Pippin explained how human tissue, imaging, computer models and microdosing offer more reliable data than can ever be obtained from animals.

Exciting developments like pharmacogenomics that use human DNA chips allow the right medicines to be prescribed for the right patients. This reduces adverse drug reactions, which kill thousands of people and cost the NHS £500m every year.

Owing to habit and cost, most companies still rely on animal tests - even though they often fail to predict hazards for humans. The arthritis drug Vioxx was linked with fatal heart attacks and strokes, though tests in mice and monkeys had shown it was "safe".

Testing on animals tells us about animals, not people. Aspirin can be fatal to cats; penicillin kills guinea pigs; arsenic poisons humans but not sheep; lemon juice poisons cats and rabbits; thalidomide can be hazardous to humans but is safe for most animals; 30 HIV vaccines worked well in monkeys but all have failed in human trials; 700 stroke treatments have succeeded in animals but not one has succeeded in patients.

I was shocked that instead of refuting any of these arguments, Dr Festing (who has never been a research scientist) suddenly began accusing Dr Pippin of being a radical animal rights campaigner and connected to Peta. Dr Pippin reiterated he had no links with any animal rights groups or charities, that he was a fully paid-up scientist and committed to proving the ineffectiveness of animal testing through scientific means only.

It makes me livid that anyone who argues against vivisection is branded a radical (some of us are quite reasonable). This tarnishes the fair-minded guardians of animal welfare and makes it harder for them to get a fair hearing.

Interestingly, Dr Festing's father is a consultant for Harlan UK, which is one of the world's largest suppliers of animals to research laboratories. He also holds financial interests in a number of pharmaceutical companies, including Glaxo-SmithKline and Celltech.

The tragic thing is that while we humans bicker and pharmaceutical companies line their pockets, in laboratories all over the world animals are suffering unimaginably agonising deaths when there are already far more effective testing methods available.

BMJ USA : Which drugs cause cancer?

Despite President Nixon's War on Cancer, launched in 1971, and billions of dollars spent since then, cancer remains the second-leading killer of Americans. Around 40% of us will get cancer, and half of us will die from it.1 This cease-less tide of human suffering starkly questions the effectiveness of our strategies, including the accuracy of our methods for identifying human carcinogens.

Millions of laboratory animals have been sacrificed for this purpose. Thousands of chemicals, including ever-increasing numbers of therapeutic drugs, are consequently described as potentially carcinogenic. Yet, are animal experiments really predictive of human carcinogenicity? The agency most responsible for protecting Americans from environmental contaminants is the Environmental Protection Agency (EPA), and the chemicals of greatest public health concern are described within its Integrated Risk Information System (IRIS) toxic chemicals database.

We recently surveyed this database to assess the human utility of animal carcinogenicity data. Most chemicals lack human exposure data and possess only animal carcinogenicity data. In the majority of cases, however 58.1% (93/160) we found that the EPA considered the animal data inadequate to support the useful human carcinogenicity classifications of probable carcinogen or non-carcinogen.

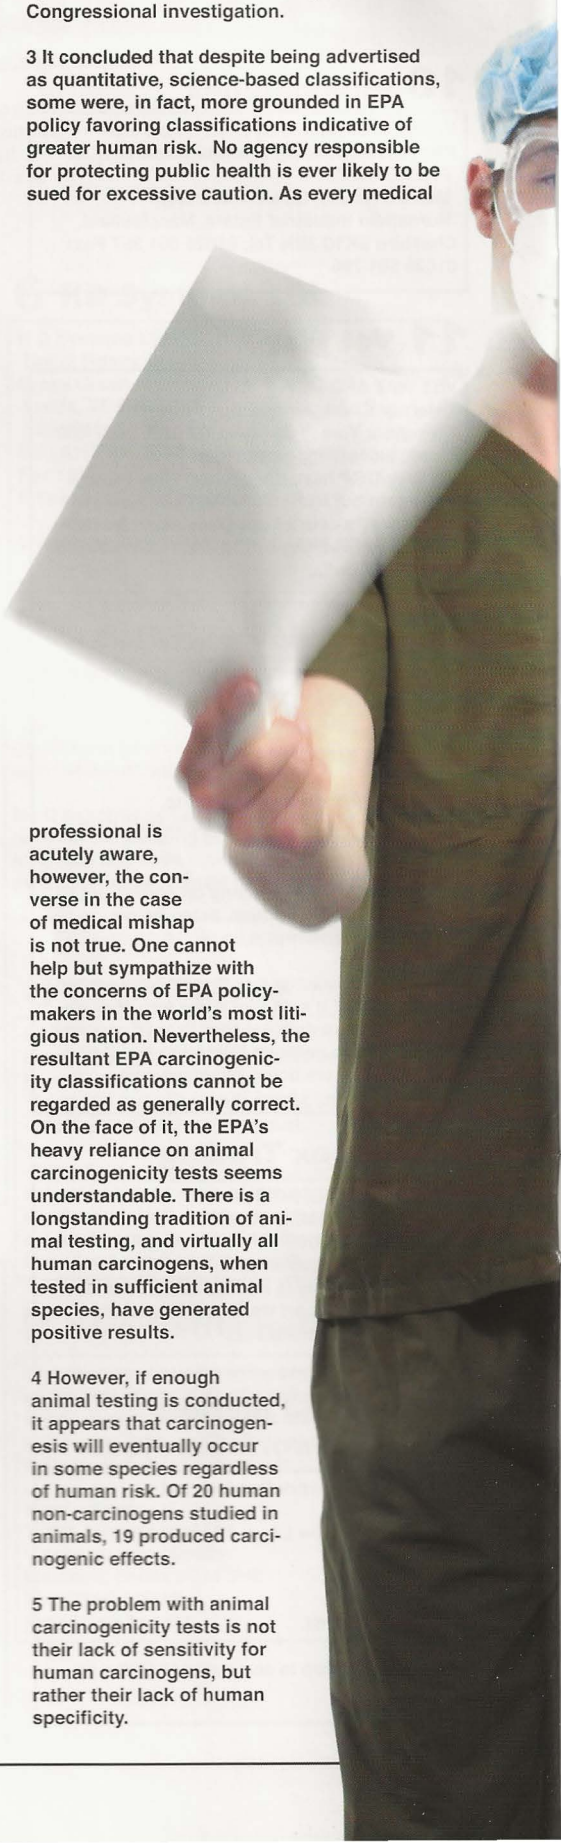
1 But at least the animal data were predictive for 42% of chemicals. Or were they?

A comparison of EPA carcinogenicity classifications with those assigned by the World Health Organization's International Agency for Research on Cancer (IARC) yielded disturbing results. For the 128 chemicals with human or animal data assessed by both agencies, human carcinogenicity classifications were similar only for those 17 possessing significant human data. For the 111 primarily reliant on animal data, the EPA was far likelier than the IARC to assign carcinogenicity classifications indicative of greater human risk.

2 The IARC is widely recognized as the world's leading authority on carcinogenicity assessments. Such profound differences in carcinogenicity classifications of identical chemicals between the IARC and the EPA appear to indicate that in the absence of human data the EPA is over-reliant on animal carcinogenicity data. Consequently, the EPA tends to over-predict carcinogenic risk.

The questionable reliability of EPA carcinogenicity assessments was also the topic of a 2000 Congressional investigation.

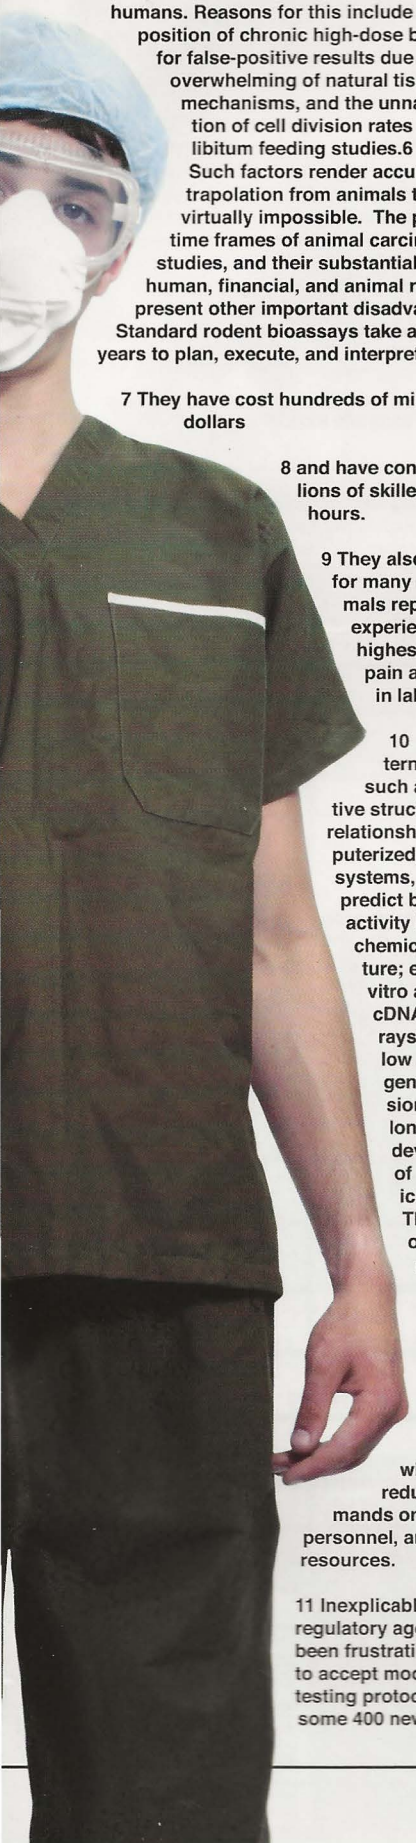
3 It concluded that despite being advertised as quantitative, science-based classifications, some were, in fact, more grounded in EPA policy favoring classifications indicative of greater human risk. No agency responsible for protecting public health is ever likely to be sued for excessive caution. As every medical professional is acutely aware, however, the converse in the case of medical mishap is not true. One cannot help but sympathize with the concerns of EPA policy-makers in the world's most litigious nation. Nevertheless, the resultant EPA carcinogenicity classifications cannot be regarded as generally correct. On the face of it, the EPA's heavy reliance on animal carcinogenicity tests seems understandable. There is a longstanding tradition of animal testing, and virtually all human carcinogens, when tested in sufficient animal species, have generated positive results.



4 However, if enough animal testing is conducted, it appears that carcinogenesis will eventually occur in some species regardless of human risk. Of 20 human non-carcinogens studied in animals, 19 produced carcinogenic effects.

5 The problem with animal carcinogenicity tests is not their lack of sensitivity for human carcinogens, but rather their lack of human specificity.

ENTS HAVE SUCCEEDED IN S SUCCEEDED IN PATIENTS.



A positive result has poor predictive value for humans. Reasons for this include the predisposition of chronic high-dose bioassays for false-positive results due to the overwhelming of natural tissue repair mechanisms, and the unnatural elevation of cell division rates during ad libitum feeding studies.6

Such factors render accurate extrapolation from animals to humans virtually impossible. The protracted time frames of animal carcinogenicity studies, and their substantial drain on human, financial, and animal resources, present other important disadvantages. Standard rodent bioassays take at least three years to plan, execute, and interpret.

7 They have cost hundreds of millions of dollars

8 and have consumed millions of skilled personnel hours.

9 They also account for many of the animals reported to be experiencing the highest levels of pain and distress in laboratories.

10 Modern alternatives exist, such as quantitative structure-activity relationship (computerized) expert systems, which predict biological activity based on chemical structure; enhanced in vitro assays; and cDNA microarrays, which allow detection of genetic expression changes long before the development of macroscopic lesions. These methods have the potential to yield superior human specificity results, in greatly reduced time frames, with greatly reduced demands on financial, personnel, and animal resources.

11 Inexplicably, however, regulatory agencies have been frustratingly slow to accept modernized testing protocols. With some 400 new drugs now introduced annually,12 a radical rethinking of our reliance on prolonged animal testing is required.

The development and implementation of rapid and predictive non-animal assays will minimize cancer losses to society, and might even restore our faith in the accuracy of the neoplastic warnings metastasizing throughout our medical formularies.

The American Chronicle: Animal Experiments Harm Human Health by Andrew Knight

Industrial lobbyist Frankie Trull has once again trotted out her tired old claim that animal experiments are essential for the advancement of medical progress (American Chronicle Oct. 5,). With millions of dollars annually spent on such experiments unavailable for potentially lifesaving initiatives such as epidemiological research or health and nutrition education, the true value of animal experiments warrants closer scrutiny.

Earlier this year we critically examined the value of animal experiments in safeguarding human health. Cancer is the second leading cause of death in developed societies, and many millions of dollars, animal lives, and skilled personnel hours are spent annually on animal tests for human carcinogenicity. However, our surveys of major toxic chemical databases used by government regulatory authorities show that animal experiments yield useful human risk assessments for substantially less than half the chemicals tested. We found that over-reliance on animal data has commonly undermined predictions of the human risk of chemicals, with major implications for public health.[i],[ii]

Similarly, maternal exposures to teratogens during pregnancy cause thousands of human birth defects annually. The medical costs are in the millions; the human costs are incalculable. Despite similar investments to those of cancer research, our survey of animal test results demonstrated widespread discordance among all species used. For known human teratogens, mean positive predictivity barely exceeded 50%.[iii] Even sidestepping the ethical considerations of such profligate animal use, reliance on animal test data for human public health decisions constitutes bad science at best, and at worst risks human lives.

But ethical considerations relating to experimental animal use must not be sidestepped. Millions of animals die every year in toxicity tests such as these, which are rated among the most painful and stressful of procedures. Nor is their suffering brief. Dosing in the standard rodent test begins at six to eight weeks of age and continues for two years, after which any remaining survivors are killed and autopsied.

Even routine procedures such as handling, blood collection, and gavaging (insertion of a stomach tube for the delivery of test chemicals or drugs in toxicity tests) cause significant fear and stress, that also affect experimental results. Our review of eighty published studies on rats, mice, monkeys, dogs, rabbits, hamsters, bats, or birds showed rapid, profound elevations in stress-related responses such as such as blood hormone levels and heart rate, for each of these procedures.[iv]

When not subject to human manipulation, laboratory animals spend most of their lives confined in small, barren cages, often in social isolation. Our review of one hundred and ten scientific studies found growing evidence that these conditions take a severe toll on the animals neurological and psychological health. Even so-called enriched environments fail to ameliorate most of these deficits.[v] Behavioural stereotypies repetitive, unvarying and apparently functionless behavior patterns that are believed to reflect animal suffering are common, occurring, for instance, in some 50% of all laboratory housed mice.[vi]

Finally, we examined alternative testing protocols, and found that data of superior human predictivity can be produced far more quickly and cheaply by expert computerized analyses of chemical structure, modernised cell culture tests, high-volume DNA tests for detecting genetic damage, expanded human clinical trials, and mandatory reporting of adverse reactions to pharmaceuticals.

If we are to consider ourselves an ethical, compassionate and intelligent society, our considerable scientific and medical resources should be directed at the best methods for alleviating both human and animal suffering. Animal experiments are unlikely to either cure human diseases nor eliminate ethical concerns. Instead, government and industry should redirect the enormous funds spent annually on animal experiments into the development and implementation of scientifically-based non-animal alternatives.

The Times. 1 September 2005. Pregnant women 'put babies at risk by taking antidepressants'.

Pregnant women who take antidepressants increase the risk of their babies suffering congenital birth defects such as high blood pressure in the lungs, a study claims. Research suggests that the use of selective serotonin reuptake inhibitors (SSRIs) antidepressants that include Seroxat and Prozac while pregnant increases the chance of having an abnormal baby by up to 60 per cent. The study, presented to the International Society for Pharmacoepidemiology conference in Tennessee last month, found that use of SSRIs in the first trimester of pregnancy increased the risk of congenital malformations by 40 per cent and cardiac defects by 60 per cent.The study of 1,054 women, first reported on the website of the medical newspaper Pulse, also found an increased risk of premature birth by 40 per cent and of low birth weight babies. SSRIs act within the brain to increase the amount of the 'feel-good' hormone, serotonin.

Prisoner Support: "If we haven't got prisoners we have stopped fighting. If our prisoners are forgotten about they have beaten us." Keith Mann

Heather Nicholson has been remanded for an alleged section assault against a hunting family. Please write her messages of support.

Heather Nicholson NR7271
HMP Bronzefield,
Woodthorpe Road,
Ashford, Middlesex TW15 3JZ

Heather can receive sealed writing paper and envelopes.

Sarah Gisborne was sentenced to six and a half years for conspiracy to cause criminal damage. This sentence has since been reduced to five and a half years on appeal. On the same day Sarah was sentenced a woman was sentenced to five years for killing her child. She is well, strong and determined so please write letters of support.

Sarah Gisborne [LT5393],
